Abstract of **CN1147738**

The present invention consists of five parts including safety controller, system controller, router, safety card and safety card vise managing system, and it is mounted between outer Internet and inside net. The present system can protect interior resource against damage from illegal access and prevent interior data from outputting. It isolates the inside net and outer Internet and performs safety inspection to the connection or data from and to the inside net based on the safety regulations set by the system, so as to raise the safety of inside net.
